# USER MANUAL

### VH TRIP Monte Carlo Special Edition Unique Feature.

Flicking the switch located under the left side display activates this special feature.

#### To lower the read out value:

Keep the switch flicked to the right while the car is moving. This will freeze the left hand display.

**Note:** The display will get an impulsion when releasing the switch, this is normal.

#### To increase the read out value:

Flick the switch to the right and release immediately. This will add 10 meters to the read out.
